

Weight of Planets questions:

1. Why didn't we measure the MASS of each planet
2. What planet was the largest weight
3. What planet is the smallest weight
4. Which 2 planets are closest in weight?
5. What surprise you about this? (you have to answer this)
6. Why do you think some inner planets weights are close to the weights of some of the outer planets when the outer planets are far larger
